

## CLAIMS

1. Single-use packaging for a liquid, semiliquid, or powder substance, the packaging comprising a protective cover (12) comprising two separable leakproof pieces of material (13, 14) and an applicator enclosed in said protective cover, the packaging being characterized in that said applicator is fixed to the inside face of one of said parts, in that it comprises a portion of fiber, sponge, or analogous structure, and in that said substance is distributed in said structure.  
5
2. Packaging according to claim 1, characterized in that said applicator comprises a piece of flexible and porous material (28) fixed to said inside face.  
15
3. Packaging according to claim 2, characterized in that a piece of cotton wool (32) or the like containing the above-mentioned substance is housed between said piece of flexible and porous material and said inside face.  
20
4. Packaging according to claim 3, characterized in that said applicator forms a pouch (24) holding said piece of cotton wool or the like captive, said pouch comprising another piece of flexible material (26) fixed at its periphery both to said inside face and to said piece of flexible and porous material.  
25
5. Packaging according to any one of claims 2 to 4, characterized in that said protective cover is made of two flexible and leakproof pieces that are bonded together by a close-outline junction line (35) surrounding the location of said applicator.  
30
6. Packaging according to claim 5, characterized in that said junction line (35) surrounds an area that is significantly greater than that occupied by said applicator, the applicator being situated substantially  
35

in the center of the surface defined by said junction line.

7. Packaging according to claim 5 or claim 6,  
5 characterized in that said junction line (35) is a line of low-strength adhesive or heat-sealing enabling the two above-specified parts of leakproof material to be separated by a "peel" effect.
- 10 8. Packaging according to any one of claims 5 to 7, characterized in that said junction line (35) extends over a fraction of its length at a distance from the facing edges of said two parts of leakproof material so as to define pull tabs (36, 37) enabling said two parts  
15 to be separated.
9. Packaging according to any preceding claim, characterized in that a peel-off cover (18) containing an adhesive dressing (19) has one of its faces fixed to an  
20 outside face of said protective cover (12).
10. Packaging according to claim 9, characterized in that the outside face of said dressing (19) is weakly secured to the inside face of said portion (40) of the peel-off cover which is not fixed to the protective cover.  
25
